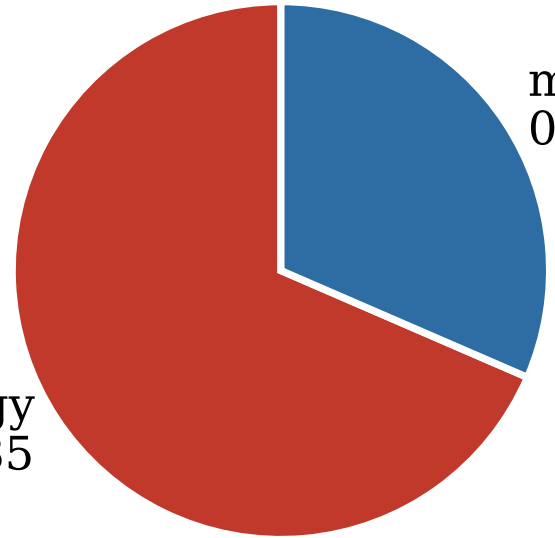
the critical density



canonical: $\kappa = \frac{1}{2}$ on the red slice

$a_0 = 9.36 \times 10^{-11}$ m s^{-2}

alternative: $\kappa = \frac{1}{2}$ on the whole pie

$a_0 = cH_0/Z = 1.131 \times 10^{-10}$ m s^{-2}

ratio $1/\sqrt{0.685} = 1.21$: never averaged
