Cosmicflows-4 peculiar flow, supergalactic slice |SGZ| < 25 Mpc (illustrative)
SGY (Mpc)
SGX (Mpc, redshift distance cz/H)
smoothed v_{pec} (km s^{-1}; σ = 10 Mpc; clipped at ±1000)
SPARC galaxies in the slice (153): pools where a_0 sets the core
eRASS1 clusters, $z < 0.037$, in the slice (74): drains still filling by infall
Milky Way
